It would be nice to load HSIP base data to the site to use as a base map

What do you think Dave?

Well that was the idea at first, I think.

We were just going to have one URL for the REOC Flex App. like

<http://r6gis1.r06.epa.gov/Region6EOC/> (Currently no layers on it). and then just update it as a new response happened instead of having a new URL for each response. I could definitely take the Los Alamos stuff off of it if you want. We can make anything you want, just let me know and we will make it happen.

Subject: Apps update completed for R6 EOC Flex Viewer v1

Eric and Brett:

The apps update and file upload has been completed for the R6 EOC Flex Viewer v1. Here is a brief summary:

1. The automatic script process did not work this time. All those folders including

"data, msd, and mxd" were not copied over by that automatic script process. I manually copied over those folders this morning. That was the reason those 5 new services were not running this morning as Brett found out.

2. manually created those 5 new services using those new MSD files on the orator server.

3. The monitoring service did not work initially as Brett also noticed. It was discovered that the data reference inside that "Monitoring" service was still using "\\B0606gdath008\share\..". I modified the "monitoring.mxd" with the data reference from the Orator server and recreate the MSD file. This new MSD was used to create the "Monitoring" service and it works fine.

4. manually modifying some flex viewer files to replace "r6gis1.r06.epa.gov" with "orator.epa.gov".

5. transfer those new flex files from orator server to "www.epa.gov" web server. This process was interrupted by some services shutdown the NCC. The problem was fixed and the NCC resources were restored later. The file transfer was completed after that.

Let us know if you see any problem.

Thank you very much.

Subject: Re: R6 EOC Flex Viewer v1 code/mxd/msd/data uploaded SW & Orator-S FTP

Eric:

Just want you to know that we are experiencing serious service interruption in the EPA NCC right now. Apps updates on the Orator server were completed already. I was in a process to upload files from the Orator server to the "www.epa.gov" server when the interruption occurred. Our system admin are working on the problem right now. They should have those NCC resources up and running again very soon. I should be able to complete the file upload in a few minutes after the NCC services are restored.

Thanks

I have been working with Qi this morning on getting it updated. The script takes care of data updates on existing services, but if we add new layers that don't belong in an existing service like the monitoring sites, then the Flex code must be updated as well and we haven't gotten that part automated yet because it takes a few more manual steps. The R6 version is up to date though with the new fire data and the sites <http://r6gis1.r06.epa.gov/Region6EOC/>

Qi is working on the Orator flex code right now, so it should be ready in about 20 minutes according to Qi. The Orator Monitoring site service is up and running; he's just updating the flex part now.

New ASPECT flight paths data/mxd/msd are updated and uploaded to Orator FTP for Torrin to run the script on. He advised me earlier he would run it at 3PM Central. R6 Flex is also up to date now with the new data.

Subject: Re: R6 EOC Flex Viewer v1 code/mxd/msd/data uploaded SW & Orator-S FTP

Flex Viewer v1 code/data/mxd/msd is uploaded to sidewinder at the following path:
/Incidents/LosAlamosFire2011/Region6/RRR/Services/Web_Services/LosAlamosSFV_v1

Same folders are uploaded to Orator-S FTP as well at the following path:
orator-s.epa.gov/Orator-s/LosAlamos_R6/LosAlamosSFV_v1

Let me know if there are any problems or questions; hopefully we got the small kinks worked out during the MS River Flood response.

Sure, no problem. If Brett can upload the code, data and maps to the Orator staging server, Qi and I can get it deployed. Will this also need to be password protected in production? I will be out this Thursday and Friday, so please be sure to cc Qi on all communications, he taught me everything I know and is my backup POC on Orator.

Subject: Preliminary ASPECT Flight Lines for Loa Alamos Fires

Gents-

Attached are the rough flight lines for ASPECT of the Area G and Waste Storage areas. These will be modified and manipulated with more accurate coordinates as the time arrives, but these will suffice to get things started. We can mobilize in Santa Fe by mid-day tomorrow, 29 June (we are calibrating at the Grand Junction pads in the morning). Please let us know what schedule works best for you. Our flight will collect radiation, chemical and if possible imagery. Also, the infrared line scanner will be able to identify the front of the fire. If the situation changes rapidly for the bad while the plane is in the air, we are preparing to process data on the

aircraft and ship it directly to the ground for a faster turn around on the situational awareness

Please contact Mark (513-675-4753) if you have any questions or concerns
